Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

Chemistry - Wikipedia

Chemistry is a natural science that studies the composition, structure, and properties of matter, as well as the changes it undergoes during chemical reactions. It is a central science because it bridges physics and biology. The field of chemistry is divided into several sub-disciplines, including organic chemistry, inorganic chemistry, physical chemistry, and analytical chemistry. The study of chemistry is essential for understanding the world around us and for developing new materials and technologies.

In physical and organic chemistry, the dispersity is a measure of the heterogeneity of sizes of molecules or particles in a mixture. A collection of objects is called uniform if the objects have the same size, shape, or mass. A sample of objects that have an inconsistent size, shape and mass distribution is called non-uniform. The objects can be in any form of chemical dispersion, such as ...
