In the previous topic, Electrical Design Philosophy for Major Types of Buildings, We talk about the different types of buildings and how the building type (function) influence its electrical design. This was very clear in our previous discussions for the electrical design requirements of the industrial buildings which were included in the following topics:

Electrical Design Requirements for Commercial Buildings

CHAPTER 1 Electrical Plan Design. 3. demand requirements of the facility based on the individual parts of the electrical distribution system (see Chapter 6).

An electrical telegraph is a telegraph that uses electrical signals, usually conveyed via dedicated telecommunication circuit or radio.. The electrical telegraph, or more commonly just telegraph, superseded optical semaphore telegraph systems, thus becoming the first form of electrical telecommunications. In a matter of decades after their creation in the 1830s, electrical telegraph networks ...

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...
