122357866 Transport Processes and Separation Process

Microfiltration is a type of physical filtration process where a contaminated fluid is passed through a special pore-sized membrane to separate microorganisms and suspended particles from process liquid. It is commonly used in conjunction with various other separation processes such as ultrafiltration and reverse osmosis to provide a product stream which is free of undesired contaminants

Microfiltration - Wikipedia

Color printing or colour printing is the reproduction of an image or text in color (as opposed to simpler black and white or monochrome printing). Any natural scene or color photograph can be optically and physiologically dissected into three primary colors, red, green and blue, roughly equal amounts of which give rise to the perception of white, and different proportions of which give rise to ...

Polymeric gas-separation membranes were commercialized 30 years ago. The interest on these systems is increasing because of the simplicity of concept and low-energy consumption. In the refinery, gas separation is needed in many processes such as natural gas treatment, carbon dioxide capture, hydrogen purification, and hydrocarbons separations.

Polymeric Gas-Separation Membranes for Petroleum Refining

Today, security principles arise in several contexts. Numerous bloggers and other on-line information sources produce lists of principles. Many are variants of Saltzer and Schroeder, including the list provided in the Open Web Application Security Project's wiki (OWASP, 2012).
