Fingerprint identification, known as dactyloscopy, or hand print identification, is the process of comparing two instances of friction ridge skin impressions (see Minutiae), from human fingers or toes, or even the palm of the hand or sole of the foot, to determine whether these impressions could have come from the same individual. The flexibility of friction ridge skin means that no two finger ...

'Chemtrail', as you may have guessed, is an abbreviation for 'chemical trail'. They are easily distinguished from ordinary 'contrails' (condensation trails) by their appearance and behaviour in the sky (see images above) – a physical difference clearly indicative of a substantive chemical difference. Serious investigators believe tiny polymer fibres and nano-sized particles of salts, oxides ...
